

50MM x 228

Family of Ammunition

MUNITIONS

MEDIUM CALIBER

DEVELOPING TOMORROW'S ADVANTAGE

The 50mm x 228 family of ammunition is a critical technology development that provides future combat vehicle gunners with greater accuracy, enhanced lethality, and extended range when engaging threats across a multitude of battlefield conditions.

In collaboration with the Combat Capabilities Development Command Armaments Center (CCDC-AC), General Dynamics Ordnance and Tactical Systems has built and tested the High Explosive Airburst munition for optimized effects against personnel targets and the Armor Piercing munition for optimized effects against materiel targets. The development of these next generation ammunition rounds equip the warfighter with overmatch capability and delivers a decisive battlefield advantage.
