1.0 Requirements

Permeability values indicated on drawings for electrical steel alloy laminations are provided for reference purposes only and do not require specific testing for validation.

Supplier shall follow any annealing requirement as referenced within the drawing, identified in note section or reference to a separate document. In such cases where a specific annealing process is not required, supplier shall follow their standard process for annealing to achieve optimal magnetic properties of the material.

The following information shall be provided with each shipment in the supplier's standard Certificate of Conformance package:
• Name and address for each annealing sub-tier and each lot (if applicable).
• The specification(s) the work was performed to and all relevant details for each lot of material delivered (e.g., type, class, treatment times, oven log, etc.)
